

Exercise 1

EMT Learns R

An exercise to begin to orient you with R Markdown.

1. Open a new .Rmd file and add a YAML header.
2. Include a paragraph of text that gives me a few sentences on why you're interested in learning R and how you think you might use it in your work for EMT.
3. Add a code chunk to your file and put these three lines of code in the chunk.

```
x<-c(4,5,25,35,4,4,24,56,20,34,13,2,35,76,2,3,8)
mean(x)
hist(x)
```
4. What was the mean of the data we entered above? Don't calculate this by hand - use your R output.
